

- ☉ If errors occur during production or the use of products, these errors cause high costs and can permanently damage the image of a company among its customers. An effective method **to recognize and avoid errors** in the early project phases is the FMEA. This team-oriented analysis is used to find and evaluate sources of error in products and processes in advance. Suitable preventive measures are derived from this.
- ☉ In order to **avoid high control and follow-up costs**, iTaz offers the following **services**:
 - ☉ **Moderation** of the design, process and system FMEA.
 - ☉ **Risk management** with evaluation for new projects or changes.
- ☉ For our developments, the FMEA is part of an effective development process.
