

- Our **development services** include the design, development, calculation such as simulation, creation of prototypes, functional measurements, validation of the pumps, as well as the support of series suppliers up to the SOP.
- Pump systems** such as power packs with valve units can be realized, also for gearboxes.
- We develop pumps in all **functional principles** like gear, internal gear, G-rotor, vane pumps, radial piston pumps and diaphragm pumps.
- All pumps are **individually designed** and validated for the required parameters such as pressure ranges, flow rates, medium, pulsation, etc.
